"We do not have to follow the old template of aging and conventional medical care," writes Jill Davey. "We have a choice, why not take it?"

For too long, millions of women in the western world have struggled with hormonal imbalance. Often it's a sudden onset of symptoms of menopause, which is a fundamental step change in hormone levels, brings uncharacteristic mood swings, weight gain, fatigue and a host of other symptoms. What if there was an alternative to this hormonal havoc, gradual decline and the disease associated with aging?

Now in 'The Menopause Cure: Hormonal Health' written with Sergey A. Dzuga, M.D. Ph.D., a former senior level surgeon, and world-renowned expert in physiology and regenerative medicine, Jill shares her research and biological hormone replacement therapy so you too can have a happy, healthy, strong and healthy, vibrant life in your golden years and beyond.

Jill D. Davey was born in Britain, has lived in Italy since 1987 and is a mother of two sons. Jill's mission is to help, educate and empower perimenopausal women, and beyond, to take responsibility of their own health.

"Now you have the possibility of reading a beautifully written book about female issues related to aging from the perspective of both the patient and the physician. It writes not only about the problems, but also their origins, which allows for a discussion in preventative actions without resorting to drug and their side effects."

Sergey A. Dzuga, M.D. Ph.D. author of six books, including 'The Migraine Cure'
